

General Instruction Sheet Wire Cube Display

Component List

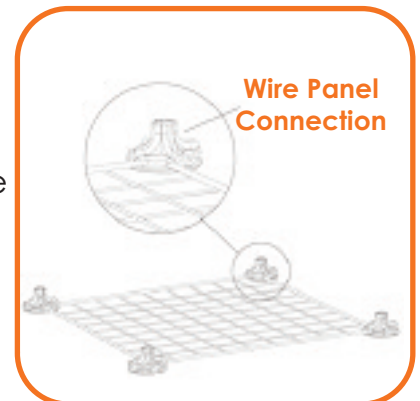

Letter Code	Description	Product Code	Product Price
A	Wire Panel	WC1	£1.95
B	Wire Panel Connector	WC2	£0.69
C	Wire Panel Clip x 16	WC3	£2.95

Wire Cube Display

Step 1 - Attach four **(B)** Connectors onto the four corners of one **(A)** Wire Panel, using the slots on the rounded edge of the connectors.

**Tip, to ensure a stable display listen for a 'click' when connecting the wire panels and connectors.*

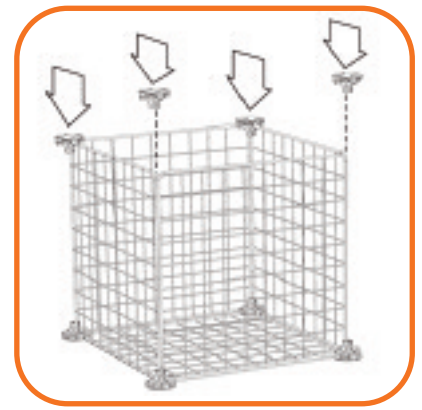

Step 2 - Form four walls using four more Wire Panels. Snap these wire panels into the perpendicular slots on the connectors.

For maximum strength, be certain all connectors are fully seated.

Step 3 - Carefully snap four more connectors onto the newly formed corners of this cube as shown.

**Tip, to help secure the structure, you can turn the cube around with the connectors facing down onto a flat surface and apply pressure from above.*

Step 4 - Turn the cube so the open end is the front of the cube. Snap two more connectors onto a new wire panel. Begin building the walls of the next cube by inserting the new wire panels into the existing open connectors.

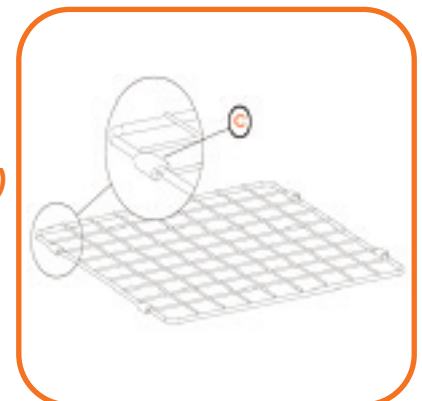

Step 5 - Continue building cubes by inserting wire panels into open slots, then attaching at the open corners with more connectors.

**Tip, to create a stable display make sure that all connectors and wire panels have 'clicked' into position.*

Shelving Units

Step 1 - To add a shelf or divider to your cube design snap two (C) Wire Panel Clips onto two opposite ends of a panel, ensuring that the wire panel clips are near the corners.

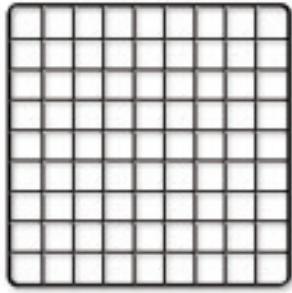

Step 2 - Position the wire panel inside the cube. Snap the open ends of each wire panel clip onto the inner wires of the cube walls.
